Preface

The Thai Medical Women's Association under the Royal Patronage of Her Majesty the Queen has been engaged in philanthropic activities for over 61 years. Our members nationwide actively contribute to our association's primary focus on women's health. The TMWA has a clearly stated objective of empowering women through the pathway of education. One of our main programs in this area is the "Scholarship for Female Medical Students in Rural Areas", which has been growing and evolving since its establishment in 2005. During this time, over 125 students have received scholarship support, among whom 47 have already graduated from medical school and are practicing as doctors--thereby helping to overcome the shortage of doctors in rural areas. Since its inception, this scholarship program has collected donations totaling over 50 million baht.

From 2005 to 2020, Dr. Pattariya Jaruthat served as the scholarship committee chairperson. Under her stewardship and thanks to the untiring efforts of all the committee members, the success of the program exceeded everyone's expectations and has attracted growing donor support. This year as part of TMWA's newly elected 34th Board of Directors, Dr. Benjaporn Panyayong has become the new chairperson of our scholarship program. She has taken the initiative to prepare this report of the program's background and progress, including details of donor contributions and program expenses.

Speaking on behalf of the TWMA, our members are incredibly proud to serve our patients and our nation in the medical profession. We stand committed to assisting the Ministry of Public Health in caring for our citizens, who are the most important resource of our country. Our hope is that our scholarship program will continue to make a growing contribution to increasing the number of doctors in rural regions of our country. Lastly, we greatly appreciate the generosity of all of the donors who support our project.

Mayura Kusum

Dr. Mayura Kusum

President, The Thai Medical Women's Association Under the Royal Patronage of Her Majesty the Queen of the 9th Reign

Thai Medical Women's Association Scholarship Program for Rural Female Medical Students

Overview

The Medical Student Scholarship Program of the Thai Medical Women's Association (TMWA) was established in 2005 and aims to support female medical students from rural areas of Thailand who have a high academic standing and financial need. Scholarships cover a range of tuition and partial living expenses for up to the full six years of medical training. As a condition of receiving this support, applicants make a prior commitment to work in rural regions following graduation. The objective of this program is to improve medical care in rural areas of Thailand. This scholarship is a charitable contribution which recipients are under no obligation to repay; but it is conditional upon their voluntarily and willingly pursuing careers in rural medicine.

In order to highlight the importance of increasing the number of physicians in rural regions, it is instructive to look at the distribution of physicians relative to the population in each region. In the major cities the ratio ranges from Bangkok 1:630, to Khon Kaen 1:1001, to Chiangmai 1:1500. In rural areas such as Nakorn Panom the ratio is 1:4804 and in Bueng Kan the ratio is as low as 1:5021. While the average for the entire country is 1:1843, the divergence in rural areas is dramatic.

Dr. Jason Roussos, a Greek professor and diplomat who spent his career in Japan, had a strong personal connection with Thailand. He was a friend of Professor Dr. Kusuma Sanitwongse Na Ayutaya, Professor Emeritus of Political Science at Chulalongkorn University and chairman of ASEAN Institute of Security and International Studies. At the suggestion of Dr. Kusuma, in 2005 Dr. Roussos left his estate of US\$100,000 to the TMWA, whose president at that time was Dr. Suwanee Raktham, for the purpose of establishing a scholarship fund for Thai female medical students dedicated to careers in rural healthcare. Since then, this program has grown dramatically and has become well-supported by many Thai citizens.

In order to administer this program, the TMWA coordinates with the Collaborative Project to Increase the Production of Rural Doctors (CPIRD) which is located within the Office of the Permanent Secretary of the Ministry of Public Health. Students identified by the CIPRD are introduced to the TMWA scholarship committee, which then reviews applicants and conducts interviews. Final awardees are announced prior to the annual TMWA meeting in October so that they can attend the meeting; receive their awards; and meet prior scholars, graduates and senior doctor members of the TMWA.

A growing number of Thai citizens including TMWA members, friends, families and local business people have become donors to this program. Also, a few scholar graduates such as Drs. Saisuda Kwanpetch, Bunyaporn Dumrongthawat, and Hussana Jisawasdi donate a portion of their salaries to this program. To date, donors have contributed more than 50 million bahts, with more than half of this total coming from overseas contributors--most notably Dr. Sheldon and Mrs. Cynthia Stone.

As of May 2021, after 15 years of operation, scholarships have been granted to 127 students, of whom 47 have graduated and are practicing doctors, 77 are still in medical school, one has switched to a different academic major, and two have retired from the program (one because she no longer has financial need, and the other because she has switched medical schools).

The primary selection criterion for scholars is that they come from rural areas and intend to live and pursue careers as rural doctors after graduation. While financial need is more important than prior academic performance, the majority of awardees maintain excellent grades and some have even received academic awards. Approximately half of the recipients received prior tuition assistance in high school; one-fourth come from farming families; and a significant percentage of scholars have lost parents or come from broken homes or families with problems relating to debt or illness.

Among the 47 doctors who have graduated, the majority are physicians who work in district or general hospitals in rural regions. Ten graduates have become residents for further training and will work in their respective regions after completing their residency. Four graduates have established private practices, and one has resigned from the government in order to care for her bedridden grandparent who suffered from a stroke.

The awardees are proud to be chosen as TMWA scholars and to be part of the TMWA family. They also feel fortunate to be given an opportunity to study and work in the field they have dreamt of. The scholarship support provides encouragement, reduces the financial burden on their families, and enables them to focus on improving their academic performance in order to graduate from medical school. They aim to be productive doctors who will continue to help others; and if they have the chance in the future they also hope to make a contribution to younger scholars and the TMWA.

Scholars are encouraged to attend the annual TMWA meeting, and they always express their appreciation for the warmth, kindness, and friendliness of the senior members of the association. The association provides them with professional and personal inspiration because it enables them to meet first-hand the doctors who receive annual awards as outstanding medical women. This hopefully will motivate them to strive to become honored in the future. The TMWA aims to enhance and empower its members to become as successful as their male counterparts through a broad range of workshops, seminars, and elective medical training abroad.

The scholars are therefore thankful for the efforts of the TMWA scholarship committee and other association members who are concerned about their personal success and academic performance; which contributes to their ability to focus on their studies. While the scholars acknowledge that the financial assistance is essential for their basic necessities, they also recognize that the personal support of the senior TMWA members contributes to their emotional well-being and academic achievement.

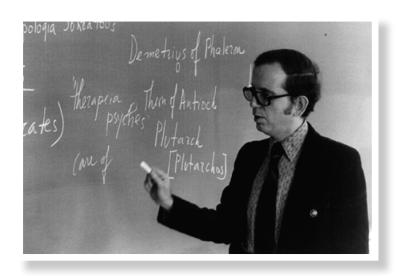

Since its inception, the success of the TMWA scholarship program has increasingly gained the support of Thai donors. Almost all of the financial donations are distributed to the students because the TMWA members volunteer their time and administrative support. This results in almost no program-related overhead expenses. This is unique in the world of nonprofit organizations which often have high operating expenses. This is greatly appreciated by foreign donors and is also increasingly understood and valued by Thai donors.

History of the Founding of the Scholarship Program

Dr. Kusuma Sanitwongse Na Ayutaya, Professor Emeritus of Political Science and International Security at Chulalongkorn University, is the daughter of Lieutenant General Dr. M.L. Ter Sanitwongse. In the early 20th Century, Dr. Ter received a scholarship from His Majesty King Rama 9's mother to study medicine in the United States. He returned to work at a hospital in the regional city of Ubol Rachathani. From her father, Dr. Kusuma learned of the shortage of physicians and medical personnel in rural regions. In 1980, she visited her relative, M.L. Pirapongse Kasemsri, who was then the Thai ambassador in Japan and she met Dr. Jason Roussos. As their friendship developed, they began to discuss the topic of establishing a Scholarship Fund for Thai Female Rural Medical Students.

Dr. Jason Roussos: The first donor to the Medical Student Scholarship Program

Dr. Jason Roussos was born in Greece, studied Physics at Brandeis University near Boston, and received a Doctorate in Philosophy from Oxford University. He spent his adult life living in Japan and teaching philosophy at Sophia University in Tokyo. Professor Dr. Jason Roussos's family, which had ties to the Greek royal family, had a close relationship with King Mongkut Rama the sixth of Thailand. Professor Dr. Roussos was also a visiting professor at Thammasart and other universities in Thailand. In 1988, he was honored with the order of the Crown of Thailand by His Majesty King Bhumibol Adulyadej Rama the ninth.

Financial Support for Medical Students

There are 21 government-administered medical schools and two private medical schools accredited by the Thai Medical Council. Training for all students involves 6 years of classes and 3 years of residency working in a rural area. The main criterion for selecting students with financial need is that they come from a rural area in Thailand and plan to live and work there after graduation. Students receive monthly stipends starting from 3,000 bahts per month for 10 months a year. Later this is increased to 5,000–5,500 bahts per month, together with tuition support of approximately 10,000s bahts biannually. Students receive this funding throughout their six years of medical training. The TMWA scholarship committee also provides free transportation to applicants so that they can come to Bangkok for interviews. In year 2019, one of the scholars was invited to join the 100-year anniversary of the Medical Women's International Association held in New York City.

TMWA Scholars

After 16 years of operation, the program has provided support to 127 scholars, of whom 47 have graduated, 77 are still in school, 1 changed faculty, 1 has declined further assistance since her family has become able to provide financial support, and 1 has left medical school for another academic program. The main selection criterion for recipients is that they are female students from indigenous families in rural areas who intend to live and work there after graduation. Students' prior academic performance is a secondary but also important factor. The majority of our students maintain high academic performance, and some even receive awards. Half of the recipients have previously received financial support while in high school. One-fourth of students came from farmers' families. A significant percentage of scholars have lost parents or come from broken homes or families with problems relating to debt or illness. Our students are currently studying at 14 universities. (see Table 2 and Chart 1 below)

Kindness Has No Borders or Boundaries

The TMWA scholarship program was established in 2005 with an initial donation by Dr. Jason Roussos. Over the following years, the program has been further supported by Thai citizens including TMWA's members, friends, and families. For example, these include: Dr. Jantra Chennavasin (Past President of TMWA), Professor Dr. Khunying Sudsakorn Toochinda, Dr. Ravivan Kanokvechayun, Dr. Sutaporn Sawasdisevi, and Dr. Khun Swanya Dej Udom, among others, also have made generous donations to the program.

Business owners such as President of TOA Paint Company (Under Lim Kim Keow's Foundation or the TOA Paint (Thailand) Ltd. Fund) has donated scholarships for 18 students. Dr. Sermwuth Susannaroj, owner of Chuakuai Co. (Chuakuai Chakunrao Co. Fund) has donated 7 scholarships. The Thai philanthropist, Khun Jariya Munsaithien (under M.C. Wimolpattamaraj Chiraprawat's Fund) has donated 6 scholarships. The majority of these donors continue to contribute year-after-year. Full support for one student over the course of six years of medical studies ranges from 420,000-470,000 Thai bahts.

From the program's inception, Dr. George Curuby and Tomoko Kanno, who are old friends of Dr. Roussos in Tokyo, have served as advisors. They have also introduced their friends, Dr. Sheldon and Mrs. Cynthia Stone of Los Angeles, who have become major and consistent donors through the Thai Physicians' Association of America.

Most importantly, the program's graduate doctors are demonstrating their gratitude by providing medical care for patients in rural areas, thereby achieving the primary objective of the program. A few of the graduates, such as Dr. Saisuda Kwanpetch, Dr. Bunyaporn Dumrongthawat, Dr. Hussana Jisawasdi, also donate a portion of their salaries to the program.

Sisters-to-Sisters Project

As the number of program scholars and graduate doctors increased, the TMWA began to invite first-year students and Alumni Scholarship Recipients (ASR) from previous years to the annual October association meeting. Eventually, the Sisters-to-Sisters Project was established in 2015, and various afternoon activities during the annual meeting have been organized since then.

Graduate doctors and current students join a welcome ceremony for all of the new scholarship awardees. This provides an opportunity to meet the scholarship committee, association members, and scholarship donors during the general meeting. Also important is the morning session at which all attendees are able to congratulate those medical women who receive the annual Distinguished Medical Women Awards, Medical Women Inspirational Awards, and other honors. In addition, all scholars are invited to attend academic presentations. This provides the practicing doctors and scholars the opportunity not only to be immersed and inspired by the success of the Alumni but also to learn from their efforts. Most meaningfully, in the afternoon a workshop discussion session with the practicing doctors in the Medical Women's Leadership Program aims to build positive attitudes among scholars.

The TMWA committee is aware of the need to instill a positive outlook in TMWA scholars so that they will bloom into successful medical women serving society and the nation. Workshops therefore share the experiences and views of graduate doctors regarding topics such as: medical ethics, morality, professional challenges for women doctors, and work/family-life balance, among others. Regarding the communication channel among the scholars and with the committees, the Line-application group, called the "Young TMWA Members", is used among association members and 82 student members. There is also another Line-group for the TMWA Graduated Scholars, consisting of 34 members in total.

Personal Benefits to Being a TMWA Scholar

Scholars are proud to be selected and to be part of the TMWA family. Not only do they feel fortunate to be given an opportunity to study and work in the field of their dreams, but they recognize that they will benefit from lessening the financial burden on their families, which contributes to better academic performance. Furthermore, they are psychologically and emotionally encouraged by the support of TMWA members and become determined to study harder in order to graduate smoothly. They aim to become productive doctors who will continue to help others, and if they have a chance in the future they will also help younger scholars and the members of the TMWA.

Since scholars appreciate the importance and benefit of the TMWA support, it is expected that they will also become donors to the program when they have the financial ability. They feel gratitude towards the association and are thankful for the kindness and sacrifices of the TMWA scholarship committee and other members who care for their personal well-being and academic performance—which contributes to their being able to focus on their academic studies. The association thereby becomes a bridge between their academic life and professional careers. They are proud and happy to be TMWA scholars, and especially to realize their dreams of becoming medical practitioners helping patients.

Personal Comments from four of the Scholars

I am proud to be studying in the faculty I dreamt of which is the Faculty of Medicine at Thammasat University, and to receive the TMWA scholarship. As I was granted the fund on October 11st, 2020, I realized the importance of giving without expecting anything in return. This has inspired me to help others. I was able to participate in an activity called "Listening with heart, Giving with love" which I am so proud for helping, giving out daily necessities and supporting the elderly at the Waiwatthananiwat Nursing Home in Samut Prakarn.

I think that the association has organized everything brilliantly according to my observation in each annual meetings and the significant number of the Distinguished Medical Women in the association. They have inspired me for further study. Regarding my self-pride, I think that I have the will to graduate from medical school because I am just a farmer's daughter who knew nothing of the medical field and got no advice from anybody. But I once cared for my sick father who was bedridden at the time. I was able to witness how the doctor worked even it was just a part of the medical practice, but I was inspired to graduate and become a better physician.

I would like to thank the association for the important opportunity which helps me to graduate from medical school in my homeland. Also, I will be pursuing an Anesthesiology residency this year to work at the Betong hospital in my hometown, in which there is a shortage of anesthesiologists. Therefore, I will be able to help people in the area of three Southern border provinces accordingly to my and the association's intention. Additionally, the association has taken care of every scholar as if they are their children. Not only providing financial support, but the association also tend to other issues. There is an annual meeting that allows us to make a connection with professors and other medical women.

I am proud to be a part of the TMWA family. All of the professors seem to be another mother of mine. They have taken care of us well, and always asking how I am doing. This family has always supported me whenever I feel tired, I know that I will have this family by my side. Thank you to my mothers, especially, Prof. Tongtip. This mother has always been taking care of me. Thank you so much.

Additional Support for Scholars

Most scholars agree that the scholarship award is sufficient for basic necessities, but there are other things that also would like to receive assistance with, for example:

- Full-tuition scholarship
- Extra funding support for electronic devices (such as Laptops and iPads), registration fees for licensing examination (The National Licensing Examination of Thailand), medical gowns, stethoscopes, textbooks, etc.
- Creating inspiration.
- Mental health support for those who have stress from studying, examination, falling behind in studying. Especially during online studies, some students become depressed over family matters, for instance.
- The need for someone to occasionally ask them about problems relating to studying.
- The graduates' perspectives on academic studies. Their experiences from working in this field and how they live their life as a role model; so the scholars can use it as a source of motivation and avoid bad behavior.
- Advice about how to stay healthy and not to deteriorate their health. Also, advice on improving grades.
- Advice about studying, such as: coping with stress and other problems in the faculty in order to adapt to their situation.
- Advice on residency training after graduation.
- The development of the medical procedure.

Continued TMWA Outreach for Graduated Doctors

There are currently 47 scholars who have graduated, most of whom are working as physicians at regional district and general hospitals. Approximately 10 of the graduated scholars are currently working as resident trainees and will begin working in their respective region after they complete this additional training. There are 4 graduates who have established private practices while one graduate has temporarily resigned from the government to care of a bedridden grandparent who has suffered from a stroke. Please refer to the table 3 below:

Table 3: Location of Graduate Scholars

Scholar Name	Year awarded	Hometown	Currently working at
Pitsinee Suwanrat	2005	Phang Nga	Private Clinic
Sunutcha Sithong	2005	Burirum	Resign from MPH
Thippawan Khayandee	2005	Phayao	Private hospital
